

Contents

1. General Introduction	1
2. Analysis of data from the literature concerning ELLC	5
2.1. Model for the range effect proposed by Gabriel	8
2.2. Application of the model to data from the literature	11
2.3. Analysis of the model	19
2.3.1. Influence of the determination of <i>REL</i>	19
2.3.2. Influence of the weighting factor w	22
2.4. Summary	27
3. Comparison of measurement procedures	29
3.1. Measurement setup	31
3.1.1. Apparatus	31
3.1.2. Adaptive procedure	32
3.1.3. Listeners	34
3.2. Results	35
3.2.1. Influence of the measurement procedures	35
3.2.2. Adaptive procedure versus constant stimuli	35
3.2.3. Influence of the temporal order of test-tone level in constant stimulus experiments	37
3.2.4. Influence of the position of the level range in con- stant stimuli experiments	38

Contents

3.2.5. Influence of the starting level in the adaptive 2-AFC procedure	40
3.3. Discussion	42
3.4. Conclusion	45
4. Influence of the measurement setup adaptive procedure	47
4.1. Introduction	47
4.2. Methods	48
4.3. Influence of the starting level	49
4.4. Influence of the initial step-size	50
4.4.1. Initial step-size 16 dB	51
4.4.2. Initial step-size 4 dB	52
4.5. Peripheral versus central processing	53
4.5.1. Method	54
4.5.2. Results	55
4.6. Discussion	57
5. Interleaved procedure	59
5.1. Introduction	59
5.2. Interleaved procedure with two tracks	60
5.2.1. Methods	60
5.3. Interleaved procedure with four tracks	62
5.3.1. Method	63
5.3.2. Results	64
5.4. Summary and Discussion	66
5.5. Individual differences and threshold of hearing	68
5.5.1. Measurement procedure	71
5.5.2. Results	72
5.6. Conclusion	75
6. General Conclusion	77
